CIA/RR GB 64-47
December 1964

SURFACE WIND DATA FOR SPECIFIED FACILITIES IN THE USSR

Summaries of the wind characteristics in the vicinity of 19 specified facilities in the USSR and surface wind data for the nearest meteorological station are given below. Table 1 gives general wind characteristics for each facility. It also indicates which of the supplementary tables (Tables 2 through 16) provides additional data on conditions at the nearest meteorological station. The supplementary tables give available data on average velocities by month or by direction, percentage frequencies of winds from different directions and at different velocities, and frequencies of calms and high winds. In most cases the nearest meteorological station is located not in the immediate vicinity of the facility but at some distance from it. Because of this and because local terrain may modify general wind patterns, the data collected at the station are not always truly representative of wind conditions at the facility. Because some tables include data from more than one source, slight discrepancies appear. Lengths of record for the data in all the tables are unknown. All data have been extracted from various official Soviet publications issued between 1954 and 1963 and are considered to be the most reliable data available.

Table 1

General Wind Characteristics at Specified Soviet Facilities

<u>Facility</u>	<u>General Wind Characteristics</u>	<u>Meteorological Station and Supplementary Table</u>
1	Flow from east or west predominant throughout year with east winds somewhat more frequent; west winds in general have higher velocities. Surface winds average 7-13 miles per hour (mph) with generally higher velocities in spring, fall, and early winter.	Biysk 52°34'N-85°15'E Table 2
2	East and southeast winds predominant, but winds with westerly components common. Surface winds average 7-12 mph with little seasonal variation. Calms frequent in summer and fall. Strong winds recorded each month but most frequent in winter. Surface winds in summer have higher velocities in afternoon.	Kamensk-Shakhtinskiy 48°21'N-40°19'E Table 3
3	Prevailing winds east in winter and west-northwest in summer. Velocities average 8-14 mph with generally higher winds in summer.	El'ton 49°08'N-46°50'E Table 4 Verkhniy Baskunchak 48°14'N-46°44'E Table 5
4	Prevailing winds in winter south or southwest; winds in summer vary in direction. Strong winds reported each month but most common in December.	Tayga 56°04'N-85°37'E Table 6

S-E-C-R-E-T

Table 1 (Continued)

<u>Facility</u>	<u>General Wind Characteristics</u>	<u>Meteorological Station and Supplementary Table</u>
5	Prevailing winds from southeast to west and northwest in winter and from west to north in summer. Velocities average 7-11 mph. Summer winds generally lighter and more variable in direction.	Moscow 55°45'N-37°35'E Table 7
6, 7	Surface winds from southwest predominant throughout year. Calms and light winds common all year with surface winds averaging 4-6 mph. Strong winds recorded each month but most frequent in winter and spring.	Krasnoyarsk 56°01'N-92°50'E Table 8
8	Prevailing winds in summer generally have northerly component and in winter southerly component; east and west winds common all year. Velocities average 7-12 mph with summer winds generally lighter. Strong winds rare in summer.	Kuybyshev 53°14'N-50°10'E Table 9
9	Prevailing winds from west, southwest, and south; secondary winds in summer from north and northwest. Calms and light winds very common. Strong winds recorded each month but most frequent in late spring.	Omsk 54°58'N-73°23'E Table 10
10, 11	Predominant wind in winter southwest and in summer west or southwest. Northeast winds common in morning and evening. Surface winds average 6-9 mph with little seasonal variation.	Perm' 58°00'N-56°15'E Table 11

Table 1 (Continued)

<u>Facility</u>	<u>General Wind Characteristics</u>	<u>Meteorological Station and Supplementary Table</u>
12, 13, 14	Winds generally variable but most commonly from southeast to northwest in winter and from west to northwest in summer. West winds in midsummer more common in midday than in morning. Surface winds average 8-10 mph with little seasonal variation. High winds infrequent except in spring.	Leningrad 59°55'N-30°15'E Table 12
15	Winds from northeast predominant, especially in winter. Winds more variable in summer with winds from south or southwest common. Surface winds average 10-13 mph with little seasonal variation. Diurnal variations pronounced in summer with highest velocities in afternoon. Land breezes blow offshore toward Lake Balkhash at night and sea breezes onshore in late morning and afternoon during spring, summer, and fall.	Balkhash 46°49'N-75°00'E Table 13
16	Prevailing winds from southwest in summer and from north and northwest in winter.	No data available
17	Winds with northerly and easterly components generally predominant in winter; in summer west and northwest winds common. Surface winds average 6-9 mph with little seasonal variation.	Kazalinsk 45°46'N-62°07'E Table 14 Kyzyl-Orda 44°48'N-65°28'E Table 15

S-E-C-R-E-T

Table 1 (Continued)

<u>Facility</u>	<u>General Wind Characteristics</u>	<u>Meteorological Station and Supplementary Table</u>
18	Prevailing winds in spring from southeast but southwest winds common; reverse pattern in fall. Summer winds generally from north in morning and from southwest in afternoon. Winter winds variable; north or northeast winds probably least frequent. Surface winds average 8-14 mph with higher velocities generally in winter and late spring.	Voronezh 51°38'N-39°12'E Table 16
19	Prevailing winds from southeast to west and northwest in winter and from west to north in summer. Velocities average 7-11 mph. Summer winds generally lighter and more variable in direction.	Moscow 55°45'N-37°35'E Table 7
